

In the Claims:

Please amend the claims, clean copy as follows:

012
1. A method of messaging upon a network implementing a messaging protocol involving at least one physician, each operating a computer from time to time capable of receiving and sending messages upon said network at a corresponding physician address on said network, at least one patient, each operating a computer from time to time capable of receiving and sending messages upon said network at a corresponding patient address on said network, and a workflow engine accessing said network capable of receiving and sending messages upon said network at least one workflow engine address on said network, comprising;

using a first medical message wizard by said patient on said patient operated computer further comprising;

generating an educated query message; and

sending said educated query message to one of said workflow engine addresses; and

performing a medical profiler process by said workflow engine further comprising

receiving said educated query message at said workflow engine address;

processing said received educated query message, to create a processed, received educated query message;

generating a patient message log entry in a medical profile of said patient from said processed, received educated query message;

generating a patient medical query message from said processed, received educated query message, said patient medical query message comprising said processed, received educated query message and an attached medical profile; and

92
Cont'd

sending said patient medical query message to a first physician with said corresponding physician address; and
using a second medical message wizard by said first physician on said first physician operated computer at said corresponding physician address further comprising:

receiving said patient medical query message;
processing said received patient medical query message, to create a processed, received patient medical query message;
generating a physician-viewable patient medical query message from said processed, received patient medical query message; and
displaying said physician-viewable patient medical query message.

67. A computer program residing on a computer readable medium accessible by a workflow engine computer system communicating with a network, said network further communicating with at least one patient operated computer and further communicating with at least one physician operated computer comprising;

93

code for receiving an educated query message from a first of said patients via said patient operated computer and generating a patient message log entry in a medical profile of said first patient;

code for receiving a patient response message from a first of said physicians based upon said educated query message from said first patient and generating a physician response log entry in said medical profile of said first patient; and

code for generating a first patient medical query message from said first patient, said patient medical query message comprising said educated query message and an attached medical profile and sending said first patient medical query message to said first physician.

ah 69. A computer program residing on a computer readable medium accessible by a workflow engine computer system communicating with a network, said network further communicating with at least one patient operated computer and further communicating with at least one physician operated computer, as recited in claim 67;

wherein code for generating a first patient medical query message based upon said received educated query message from said first patient and sending said first patient medical query message to said first physician further comprises code for determining said first physician based upon said received educated query message from said first patient.
